CSA1522 - CLOUD COMPUTING AND BIG DATA ANALYTICS
Experiment-6

6. Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

AIM:

To develop a simple Employee Payroll Processing System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application stores employee details and salary components (Basic Pay, HRA, DA, TA) and calculates the gross pay and net pay of each employee.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Employee Payroll Processing System.

Create the form Employee Details with the following fields:

- Employee Name, Employee Code
- Department, Designation
- Mobile Number, Email Address
- Date Of Joining, Work Experience
- Status (Active / On Leave / Inactive)

Create the form Payroll Records with the following fields:

- Employee (lookup of Employee Details), Salary Month
- Basic Pay, HRA, DA, TA
- Gross Pay, Deductions, Net Pay
- Payment Status (Paid / Pending / Other), Currency

Create a workflow named Auto-calculate Gross Pay on the Payroll Records form (Created or Edited, User input of Gross Pay) with a Deluge script that calculates Gross Pay = Basic Pay + HRA + DA + TA.

Calculate Net Pay = Gross Pay - Deductions.

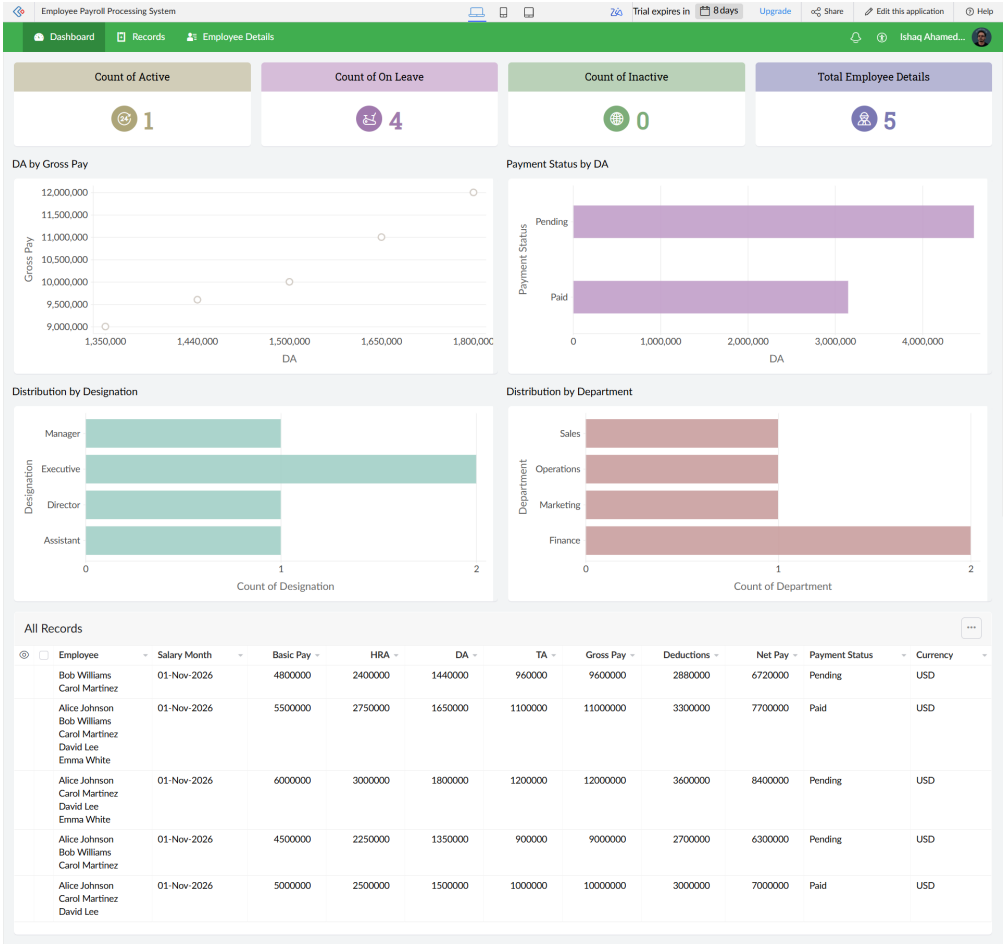

Create a Dashboard showing employee status counts, charts by designation and department, and the All Records report.

Save and publish the application.

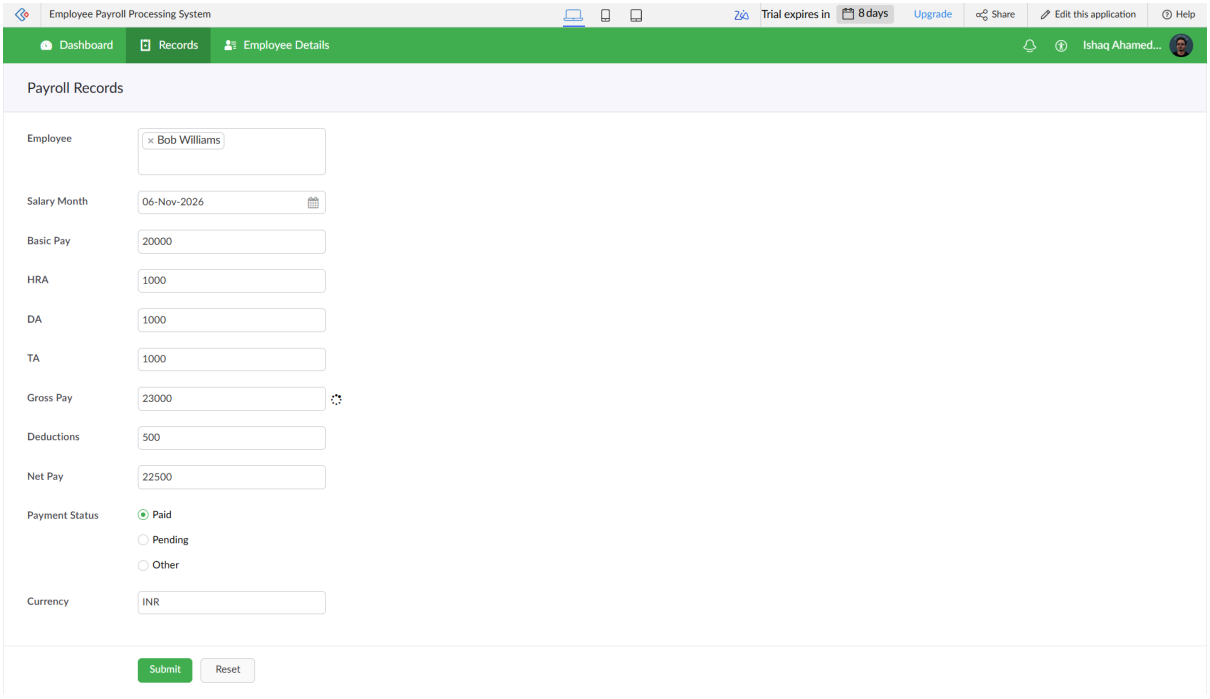

Enter sample employee and payroll details and submit the form.

Verify that the salary calculations are performed correctly in the report and the dashboard.

WORKFLOW:

RESULT:

A cloud-based Employee Payroll Processing System was successfully developed using Zoho Creator. The application stores employee details and salary components, automatically calculates the gross pay and net pay, and displays the records in reports and a dashboard. This demonstrates the Software as a Service (SaaS) model using a cloud platform.
