CSA1522 - CLOUD COMPUTING AND BIG DATA ANALYTICS
Experiment-5

5. Create a simple cloud software application for Mark Sheet Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the student, Reg no of the student , Subjects , Marks, Average, percentage, rank, overall performance etc.

AIM:

To develop a simple Student Mark Sheet Processing System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application stores student details and subject marks and calculates the total marks, average, percentage, result and overall performance of each student.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Student Mark Sheet Processing System.

Create the form Student Details with the following fields:

- Student Name, Registration Number
- Department, Course, Semester, Enrollment Date
- Contact Email, Contact Phone, Address
- Current Status, Guardian Name, Guardian Contact

Create the form Mark Entry with the following fields:

- Student (lookup of Student Details)
- Subject 1 to Subject 5 Name and Mark
- Total Marks, Average Marks, Percentage
- Result (Pass / Fail), Performance Rating
- Exam Year, Exam Term (Term1 / Term2 / Final)

Create a workflow named Validate Mark Entry Submission on the Mark Entry form (Created or Edited, Validations on form submission) with a Deluge script that cancels the submission if any subject mark is negative.

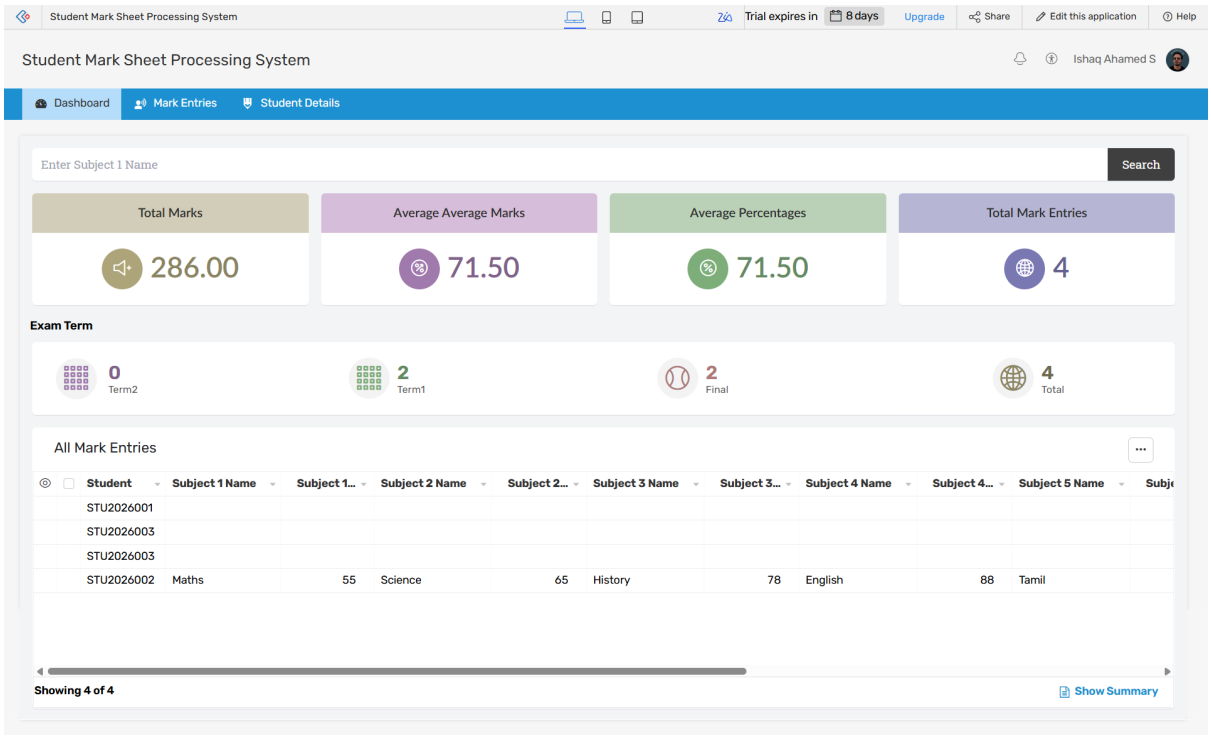

Create a Dashboard showing total marks, average marks, average percentage, exam term summary and the All Mark Entries report.

Save and publish the application.

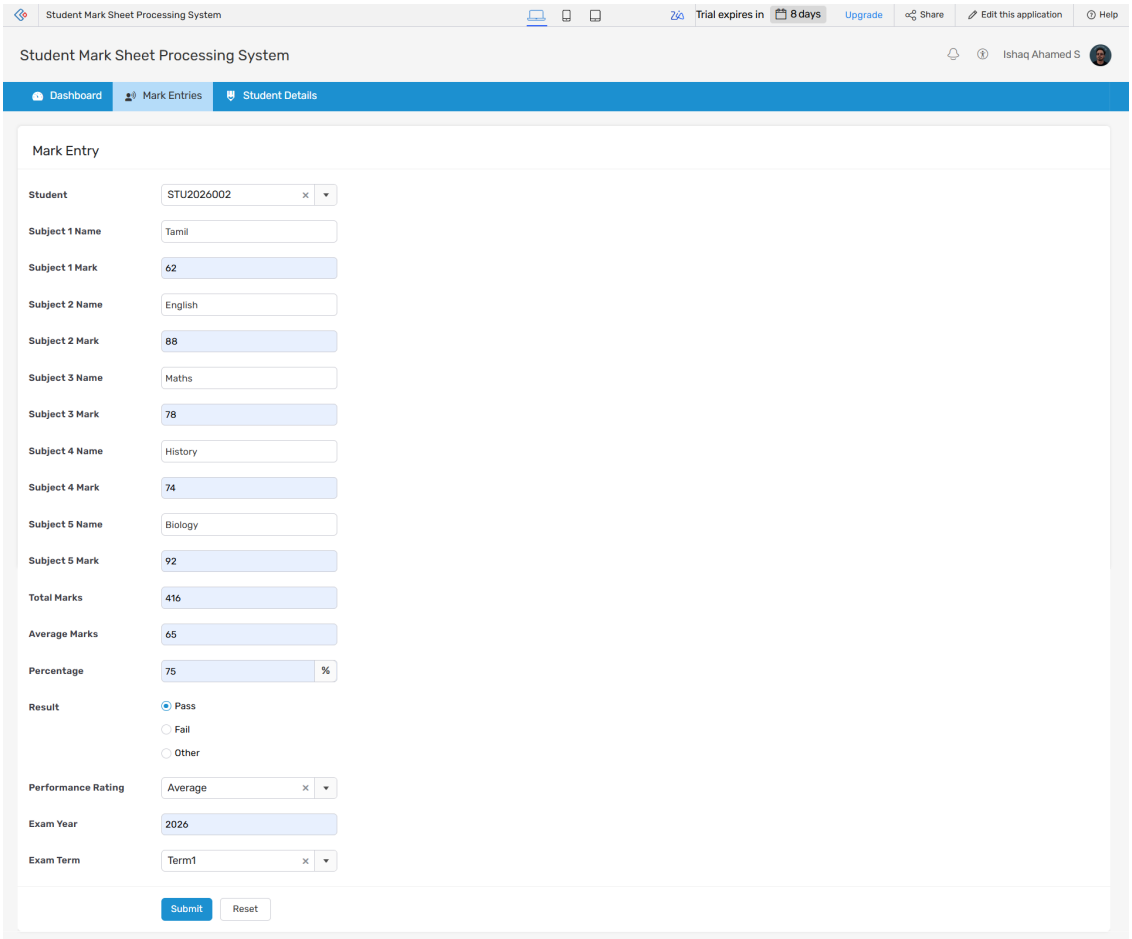

Enter sample student and mark details and submit the form.

Verify the records in the report and the dashboard.

WORKFLOW:

RESULT:

A cloud-based Student Mark Sheet Processing System was successfully developed using Zoho Creator. The application stores student details and subject marks, validates the mark entries, and displays the total, average, percentage, result and performance rating in reports and a dashboard. This demonstrates the Software as a Service (SaaS) model using a cloud platform.
