CSA1522 - CLOUD COMPUTING AND BIG DATA ANALYTICS
Experiment-7

7. Create a simple cloud software application for Students Attendance System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the students, course, present , Absent, course attendance, OD request, grade, attendance percentage, etc.

AIM:

To develop a simple Student Attendance Management System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application records the daily attendance (present / absent) of students for each subject, tracks the attendance percentage and handles On Duty (OD) requests.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Student Attendance Management System.

Create the form Student Details with the following fields:

- Student Name, Registration Number
- Department, Course, Semester
- Mobile Number, Email Address, Address
- Date Of Admission, Guardian Name, Guardian Contact
- Status

Create the form Attendance Records with the following fields:

- Student (lookup of Student Details), Attendance Date, Subject Name
- Attendance Status (Present / Absent / Other), Remarks
- Class Type, Attendance Percentage
- Semester, Year, Batch, Instructor Name

Create the form Od Requests (Student, OD Date, Reason For OD, OD Status, Duration Days, Approved By, Approval Date, Semester, Year, Remarks, Linked Attendance).

Create a workflow named Block Absentee Submission on the Attendance Records form (Created or Edited, Validations on form submission) with a Deluge script that blocks the submission when the status is Absent and no remarks are given.

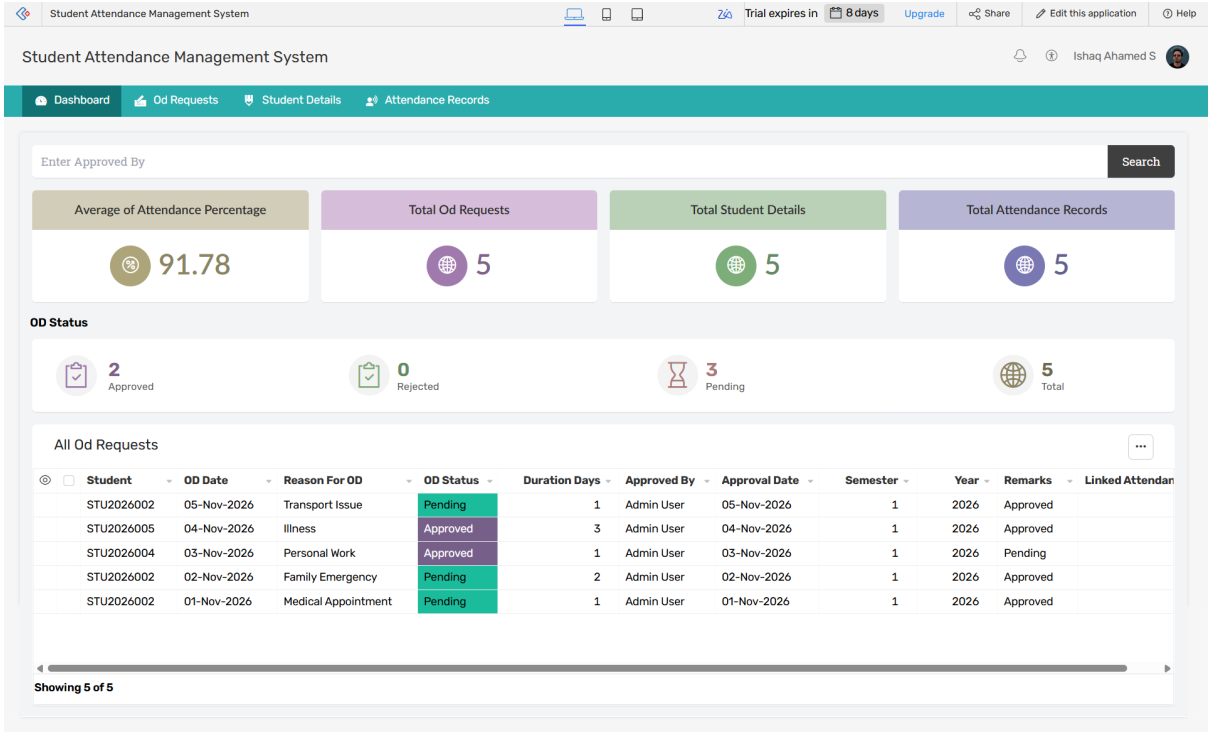

Create a Dashboard showing the average attendance percentage, OD request status and the All Od Requests report.

Save and publish the application.

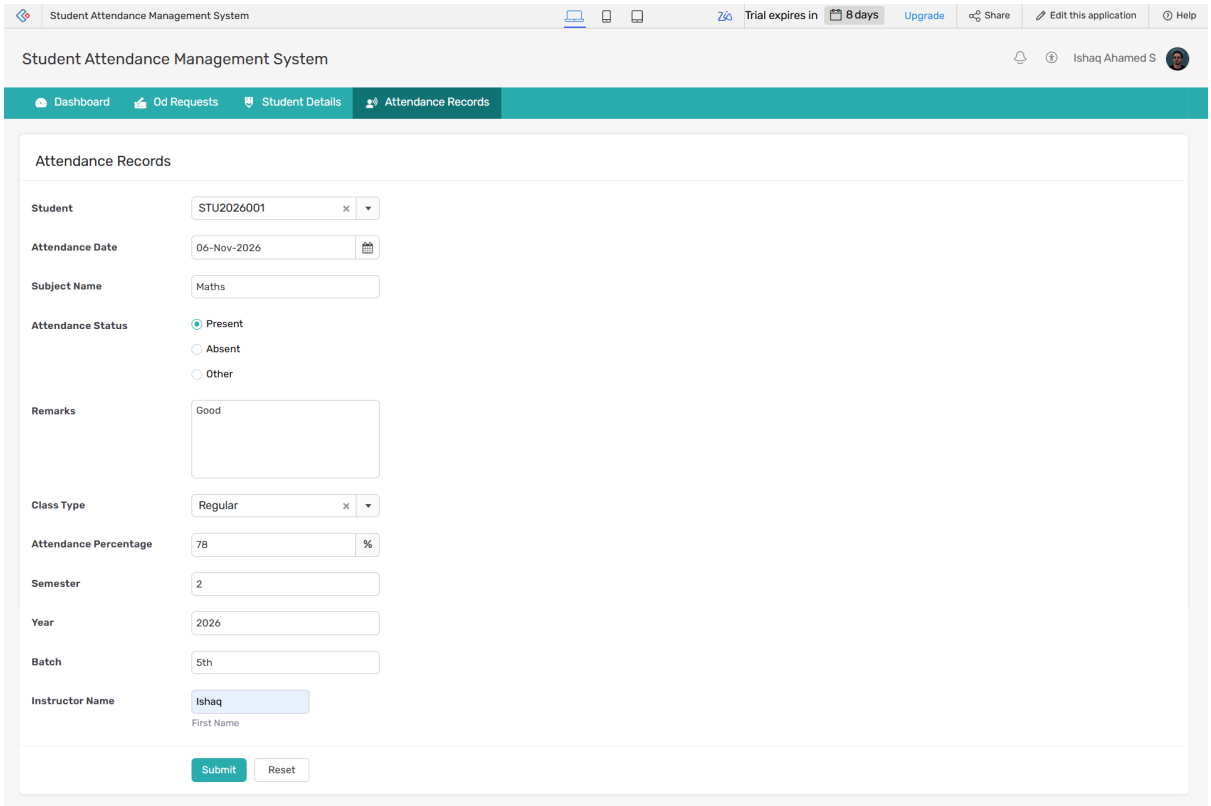

Enter sample student, attendance and OD request details and submit the forms.

Verify the records in the reports and the dashboard.

WORKFLOW:

RESULT:

A cloud-based Student Attendance Management System was successfully developed using Zoho Creator. The application stores student details, attendance records and OD requests, validates absent entries, and displays the attendance percentage and OD status in reports and a dashboard. This demonstrates the Software as a Service (SaaS) model using a cloud platform.
