CSA1522 - CLOUD COMPUTING AND BIG DATA ANALYTICS
Experiment-8

8. Create a simple cloud web application for student counselling system using any Cloud Service Provider to demonstrate SaaS with the fields of student name, age, address, phone, subjects studied, Year of passing, percentage of marks, domain interest, etc.

AIM:

To develop a simple Student Counselling System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application stores student details such as name, age, address, phone, subjects studied, year of passing, percentage of marks and domain interest, and records the counselling sessions of each student.

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Student Counselling Management System.

Create the form Student Details with the following fields:

- Student Id, Student Name, Age
- Address, Phone Number, Email Address
- Subjects Studied, Year Of Passing, Percentage
- Domain Interest

Create the form Counselling Records with the following fields:

- Student (lookup of Student Details), Counselling Date
- Counsellor Name, Area of Interest, Career Goals
- Counselling Remarks
- Counselling Status (Completed / Pending / Other)

Create a workflow named Notify Student on Session Completion on the Counselling Records form (Edited, Successful form submission) with a Deluge script that sends an email to the student when the counselling status is Completed.

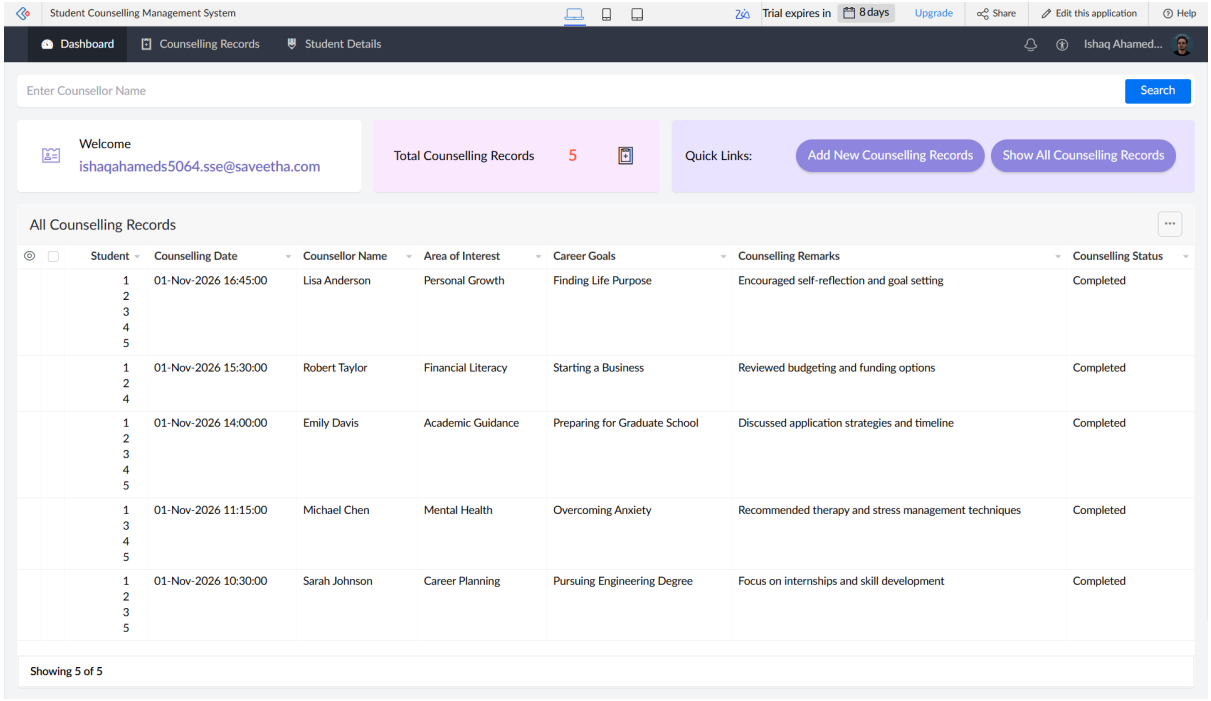

Create a Dashboard showing the total counselling records, quick links and the All Counselling Records report.

Save and publish the application.

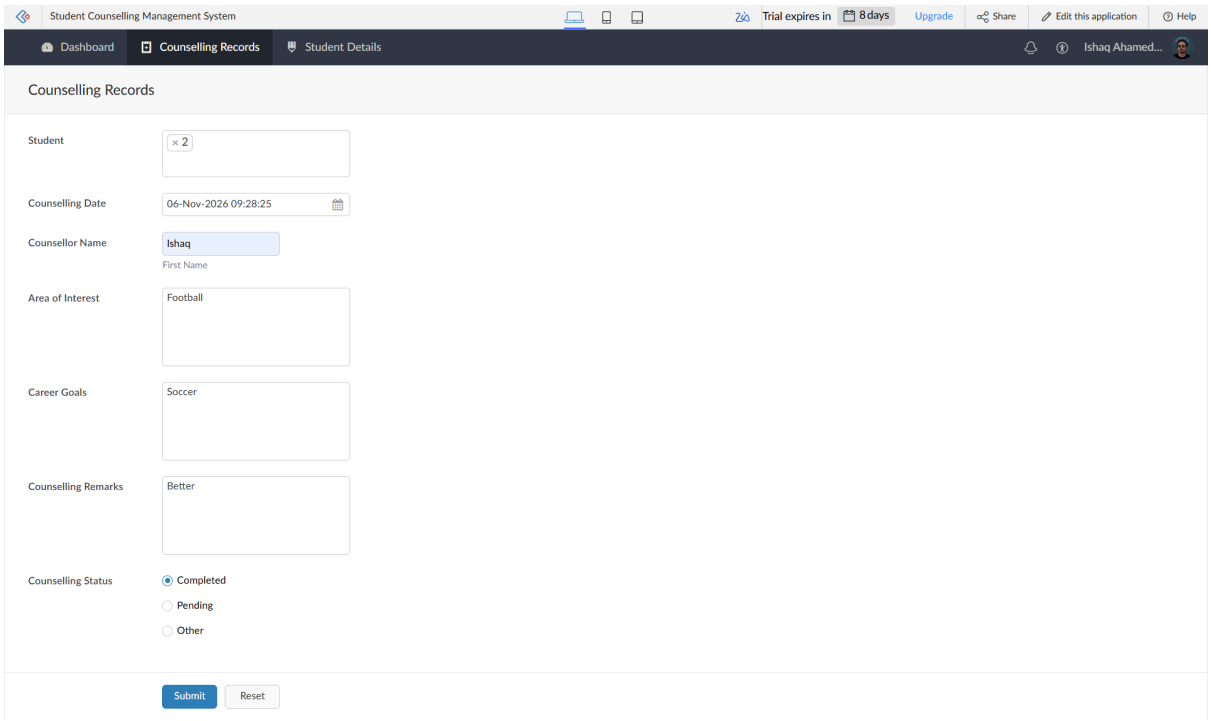

Enter sample student details and counselling records and submit the form.

Verify the records in the report and the dashboard.

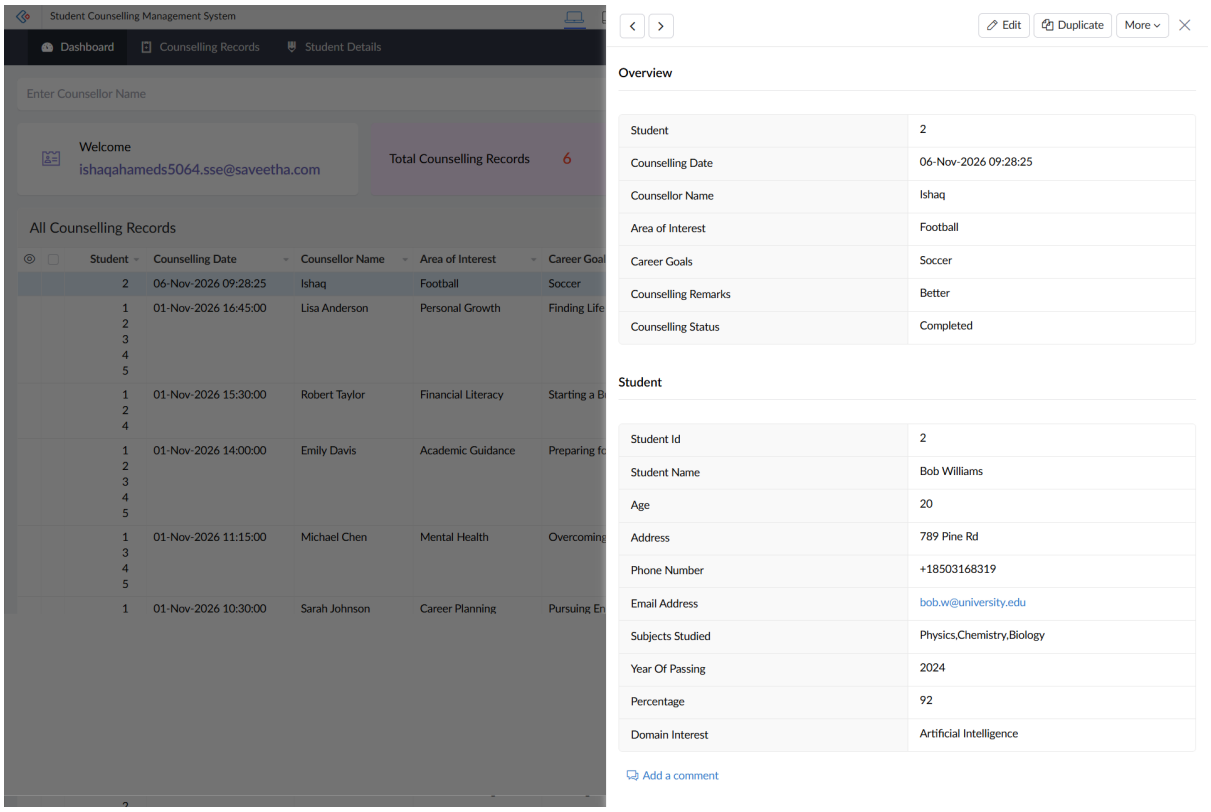

DESIGN:

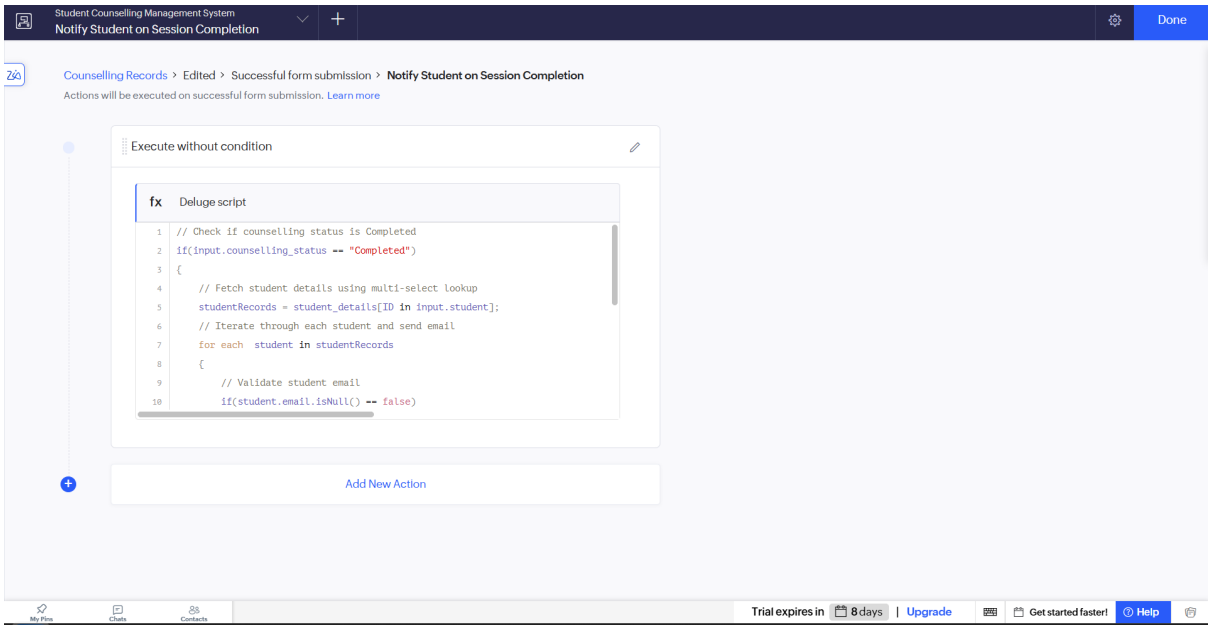

INPUT:

OUTPUT:

WORKFLOW:

RESULT:

A cloud-based Student Counselling System was successfully developed using Zoho Creator. The application stores student details and counselling records, sends an email notification when a counselling session is completed, and displays the records in a report and dashboard. This demonstrates the Software as a Service (SaaS) model using a cloud platform.
