CSA1522 - CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-1

1. Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as one way, round trip, From, to, Departure, Departure, Travelers & Class, Fare Type, International and Domestic Flights etc.

AIM:

To develop a simple Flight Reservation System using Zoho Creator (Cloud Service Provider) to demonstrate the Software as a Service (SaaS) model. The application captures passenger details, journey type, travel class, fare type, source and destination, and flight category (International / Domestic).

PROCEDURE:

Log in to Zoho Creator.

Create a new application named Flight Reservation System.

Create a form named Flight Booking with the following fields:

- Passenger Name (First Name, Last Name)
- Email
- Phone Number
- Departure Date
- Travellers
- Journey Type (One Way / Round trip)
- Travel Class (Economy / Business)
- Fare Type (Regular / Student)
- From
- To
- Flight Category (International / Domestic)

Create a workflow named Calculate on the Flight Booking form, with record event Created or Edited and form event User input of Fare Type.

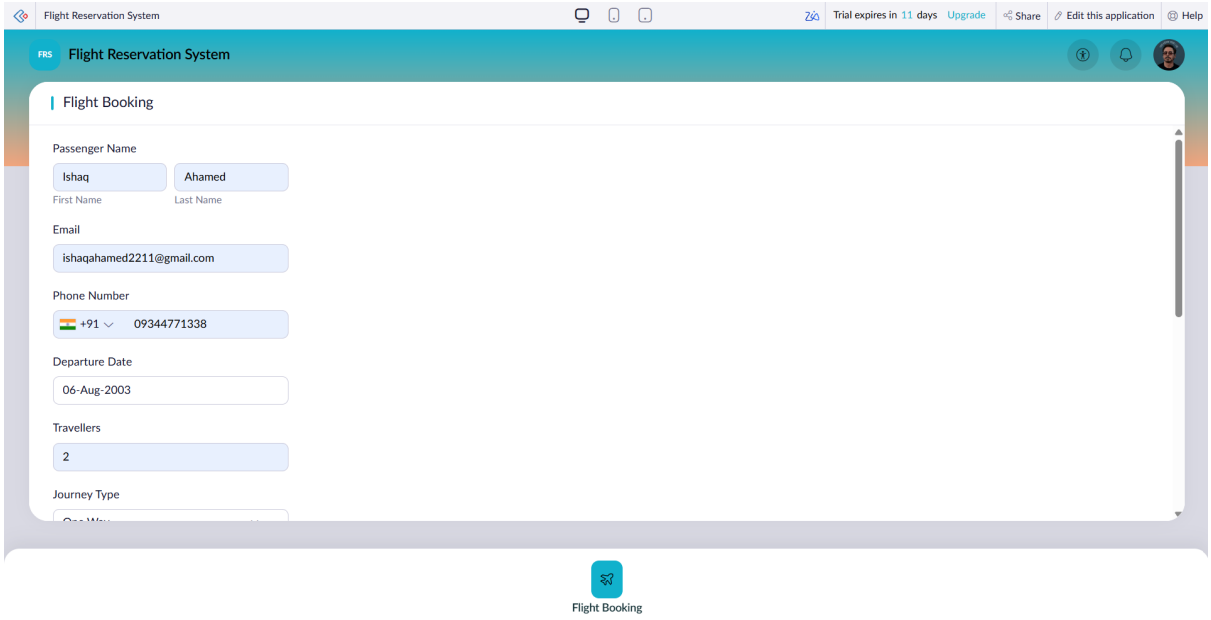

Add a Set Variable action in the Deluge Script editor and save the workflow.

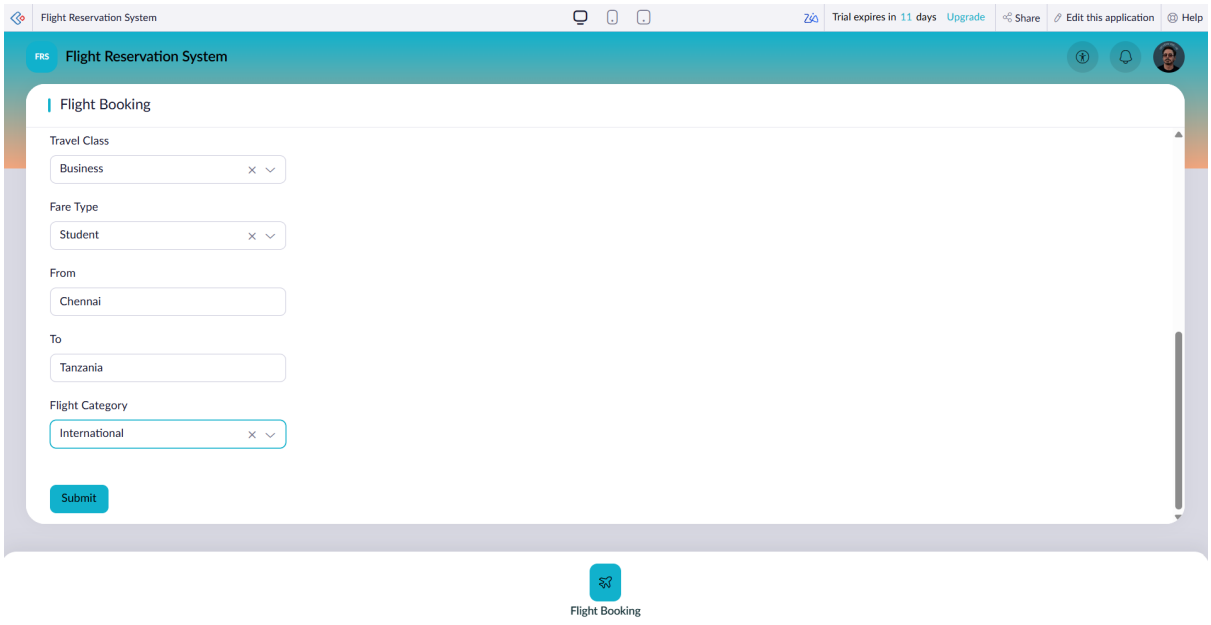

Save and publish the application.

Enter sample passenger and flight details and submit the form.

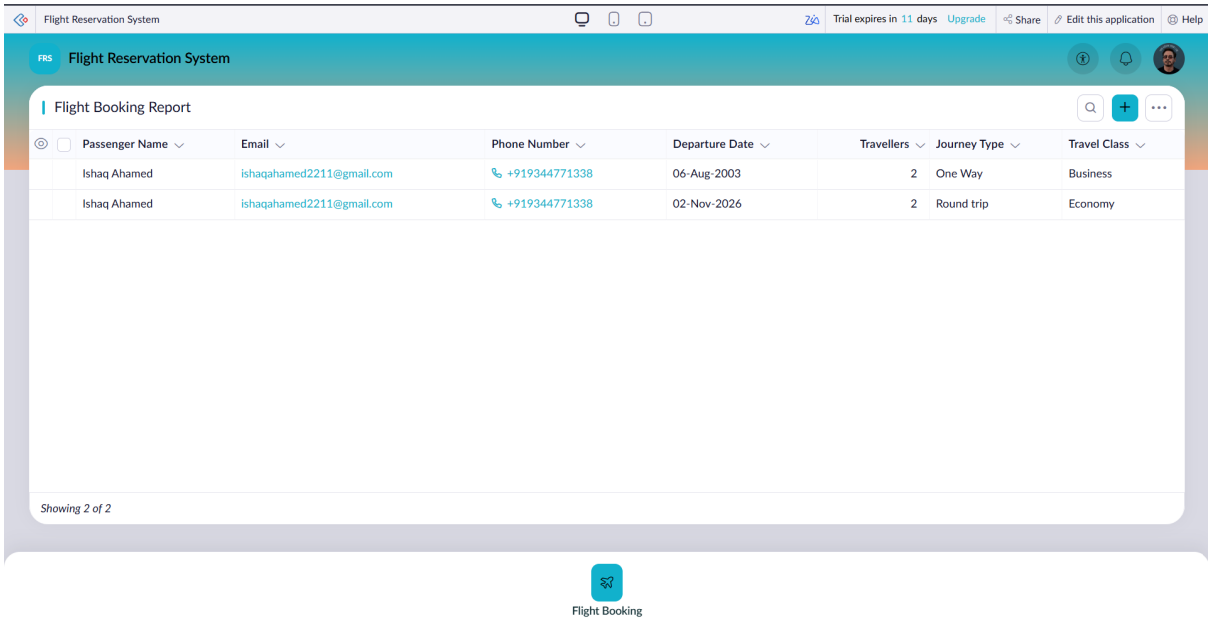

Verify the submitted records in the Flight Booking Report.

WORKFLOW:

RESULT:

A cloud-based Flight Reservation System was successfully developed using Zoho Creator. The application stores passenger and flight booking details such as journey type, travel class, fare type, source, destination and flight category, and displays them in a report. This demonstrates the Software as a Service (SaaS) model using a cloud platform.
